                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    presence or absence of a compound. Also included are screening for a modularcor of HIV infection, detecting HIV infection of cells (comprising contacting a cell that has been recombinantly modified to express at least one of human chemokine receptors 88C and 88-28 with HIV, and detecting HIV infection in the cell) and inhibiting HIV infection of cells (comprising contacting cells with an antibody to at least one of human chemokine receptors 88C and 88-28 with HIV, and detecting HIV infection of the cell after the contacting step). The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with the aberrant expression or activity of 88C or 88-28 chemokine receptors, such as atherosclerosis, rheumatoid arthritis, tumour growth suppression, asthma, viral infection, ALDS and other inflammatory conditions. The genes for human 88-C and 88-buman
                                                                                                                                                                                                                                                                    Chemokine receptor 88C; chemokine receptor 88-2B; human immunodeficiency virus; simian immunodefici infection; vaccine; virucide; gene; 88.

                                                                   The invention relates to a novel antibody that specifically binds to the extracellular domain of a chemokine redeptor 88C or 88-2B polypeptide expressed on the surface of cells. The antibody fails to cross-react with an MCP-1 receptor (CCCKR-2) and is useful for inhibiting human or simian immunodeficiency virus (HIV or SIV) infection of the cells expressing chemokine receptor 88C or 88-2B. The invention is also used to detect 88C or 88-2B gene products their analogues or biologically active fragments. The antibody products may be used to as modulators of receptor activities or to diagnose tissue-specific variations in expression of 88-2B or 88C. The invention is also used in the preparation of vaccines. The present sequence is the human chemokine receptor 88-2B cDNA.
                                                                                                                                                                                                                                                                                                                                                        Gray
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           misc_feature
                                                                                                                                                                                                                                                   New antibodies specifically binding to (the extracellular domain of) a chemokine receptor 88C polypeptide expressed on the surface of cells, useful for inhibiting human or simian human immunodeficiency infection such cells.
                                                                                                                                                                                                                                                                                                                  WPI; 2004-687775/67.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
```

```
The invention relates to a method of modulating chemokine receptor 88C-cc mediated human or simian immunodeficiency virus (HIV or SIV) infection of CC cells. The method comprises administering to a mammalian subject a CC composition comprising an antibody or a polypeptide comprising an antiped composition comprising an antibody, where the mammalian subject is CC infected with HIV or SIV, and where the antibody is administered in an CC amount that modulates HIV or SIV infection of 88C-expressing cells in the Subject. The antibody is a humanised antibody which specifically binds to CC the extracellular domain of the chemokine receptor 88C polypeptide and CC the extracellular domain of the chemokine receptor B8C polypeptide and CC trains to cross-react with an MCP-1 receptor (CCCXR-2) or binds to the N-CC receptors, namely 88-2B and 88-C, involved in leukocyte trafficking. The CC modulators of the chemokine receptors of the invention are useful for CC tracting diseases such as HIV or SIV infection (e.g. acquired immune CC deficiency syndrome (AIDS)), pooriasis, rheumatoid arthritis, confilammation. The present sequence is the human chemokine receptor 88-2B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent in a patent in the carcinoma and capable of the carcinoma and capable of the capable

```
cc recombinant nucleic acid or expression vector, a microarray for detecting cc acancer-associated (CA) nucleic acid comprising at least one probe cc comprising at least 10 contiguous nucleotides of any of the above-cc mentioned nucleotide sequences, an isolated polypeptide (encoded within an open reading frame of a CA sequence selected from any of the 95 cc complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above cc monoclonal antibody, a pharmaceutical domposition comprising the above cc antibody and a pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody cited above, methods for diagnosing cancer or for detecting the presence or absende of cancer cells in an individual, a method for delivering a therapeutic agent to cancer cells in an individual, a method for delivering a therapeutic agent to cancer cells of an individual, a method for thibbiting gradwth of cancer cells in an occupantice of the activity of a CA protein (CAP), methods for detecting cancer cells associated with expression of a polypeptide of mathematics of method for treating cancers and a method for inhibiting the expression of associated with expression of a polypeptide in a test cell sample, a section of a cell. The composition and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and cleukaemia. These may also be used in selectronic format directly from WIPO at the printed of the printed cequence data for this patent did not form part of the printed certification, but was obtained in electronic format directly from WIPO at the printed certification, but was obtained in electronic format directly from WIPO at the printed certification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-FEB-2003; 2003US-00367094.

The nucleic acids encode cancer associated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above the isolated nucleic acid cited above, a host cell comprising the above the isolated nucleic acid cited above, a host cell comprising the above the isolated nucleic acid cited above, a host cell comprising the above the isolated nucleic acid cited above, a host cell comprising the above the isolated nucleic acid cited above, a host cell comprising the above the isolated nucleic acid cited above, a host cell comprising the above the isolated nucleic acid cited above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     claim 16; seqid 183; 310pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma an leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2004-652914/63.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        문
The invention relates to determining whether a subject has, or is at risk of developing, an abnormally low high density lipoprotein-C (HDL-C) level comprises determining whether the subject has an allelic variant of a polymorphic region from any of 27 genes (alleles listed in Table 5 of the specification). Also included are determining whether a male subject has,
                                                                                                                                                                                                                                                                           Determining whether a subject has, or is at risk of developing, an abnormally low high density lipoprotein-C (HDL-C) level comprises detecting an allelic variant of a polymorphic region from any of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (11) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (11) for screening of a bloactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (vii) for inhibiting the activity of CAP; (ix) as a blochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent

The protein has a molecular weight of 12.76 kD. The invention also related to a method for the recombinant production of the protein, an antagonist of the protein, and the use of the protein, gene and antagonist in therapeutic applications. Protein phosphatase 12.76 can be used in the treatment of a variety of diseases such as embryonic development disorders and tumours. The present sequence represents cDNA encoding human protein phosphatase 12.76

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted protein genes, and ABP00947-ABP01363 represent the proteins they encode. C ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The cinvention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening and recombinant c vectors and host cells comprising a nucleic acid of the invention. The c secreted proteins are thought to be involved in biological activities associated with cellular signalling, cellular differentiation, cell c migration, prohormone activation and neurotransmitter activity. The c secreted proteins, nucleic acids encoding them, antibodies or antibody c fragments specific for the secreted proteins, and modulators of protein c fragments specific for the secreted proteins, and modulators of protein c activity are useful for diagnosing or treating cancers or other c hyperproliferative disorders. Additionally, the secreted proteins and c their nucleic acids may also be used in the treatment of autoimmune c disorders, inflammatory disorders, diseases involving anglogenesis, AIDS (acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote c disorderic acids of the invention may be used for chromosome manning in gene therapy.

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible f GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Overlapping Sequences:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                            Sequence Validation:
                                                                                               This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequencing vector: plasmid; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319

COMMENT

TITLE

Overlapping Sequences:
5': RP11-91E8 (UWGC:bc0216) AC026349
3': CTD-2563A18 (UWGC:bc0730)

Sequence Quality Assessment:
This entry has been annotated with sequence quality
This estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible GenBank flat file format but are available as part of this entry's ASN.1 file. from the zero.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phrequality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. Phred

Sequence Validation:
This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered

This is a 'working draft' sequence. It currently
its of 26 contigs. Gaps between the contigs
presented as runs of N. The order of the pieces
leved to be correct as given, however the sizes
gaps between them are based on estimates that have
ed by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         )51 bp Contig 18: 189152-189476 pp concrg 17: 5 bp 191476-201473 bp Contig 21: 201574-202307 bp

Moulton, E.A. and Rothenberg, M.E.

Analysis of the CC chemokine receptor 3 gene reveals a complex
exon organization, a functional role for untranslated exon 1, a
exon organization, a functional role for untranslated exon 1, a
broadly active promoter with eosinophil-selective elements
